HTC Droid Incredible Optical Joystick Replacement

Optical joystick replacement.

Geschrieben von: Andrew Optimus Goldheart
EINLEITUNG

Use this guide to remove and replace the optical joystick on your Droid Incredible.

WERKZEUGE:

- Spudger (1)
- T6 Torx Screwdriver (1)
- Tweezers (1)
**Schritt 1 — Battery**

- Press your thumbnail into the slot between the rear panel and the front case located in the bottom of the phone.

  *Useful tip: a penny or dime works in a pinch if you can't use your thumbnail.*

- Gently pry the rear panel up and away from the phone. You may need to slide your thumb up the crack to separate the rear panel from the front case.

**Schritt 2**

- Remove the rear panel from the phone.
Schritt 3

- Insert a fingertip into the gap between the battery and the rear inner frame, located between the battery and the speaker. Slide the battery away from the speaker, widening the gap.
- Lift the top of the battery up and remove the battery from the rear inner frame.

Schritt 4 — MicroSD card

- Press the MicroSD card further into its slot until it clicks.
- Release the MicroSD card, and it will pop out slightly.
**Schritt 5**

- Pull the MicroSD card straight out of its slot.

**Schritt 6 — Rear Inner Frame**

- Remove four T6 Torx screws securing the rear inner frame to the front case.
Schritt 7

- The rear inner frame is attached to the front case by nine plastic clips, marked here for reference.

Schritt 8

- Starting on the bottom of the phone, gently push in on the (red) rear inner frame behind each black clip with a small flathead screwdriver.

- Go slow and be gentle, you may have to go back and forth between each side several times to work the rear inner case free.
Schritt 9

- Losen Sie die Clips auf der Seite neben der Kamera mit dem auf der vorherigen Schritt beschriebenen Verfahren.

Schritt 10

- Drehen Sie das Telefon um 180 Grad und lösen Sie die drei Clips auf der Seite neben dem Lautsprecher. Beachten Sie, dass der mittlere Clip auf dieser Seite kleiner ist als die anderen.
Schritt 11

- Use the same technique to loosen the clip on the top of the phone.
- You may need to gently lift the bottom of the rear inner frame to free this clip.

Schritt 12

- Remove the rear inner frame.
Schritt 13 — Optical Joystick

- Remove the tape covering the optical joystick ribbon cable.

Schritt 14

- Flip the ZIF connector on the optical joystick cable.
- Lift the optical joystick out of its socket.
- Use a pair of tweezers to pull the optical joystick ribbon cable straight out of its socket.
Schritt 15

- Remove the optical joystick.

To reassemble your device, follow these instructions in reverse order.
