Step 1 — Back Cover
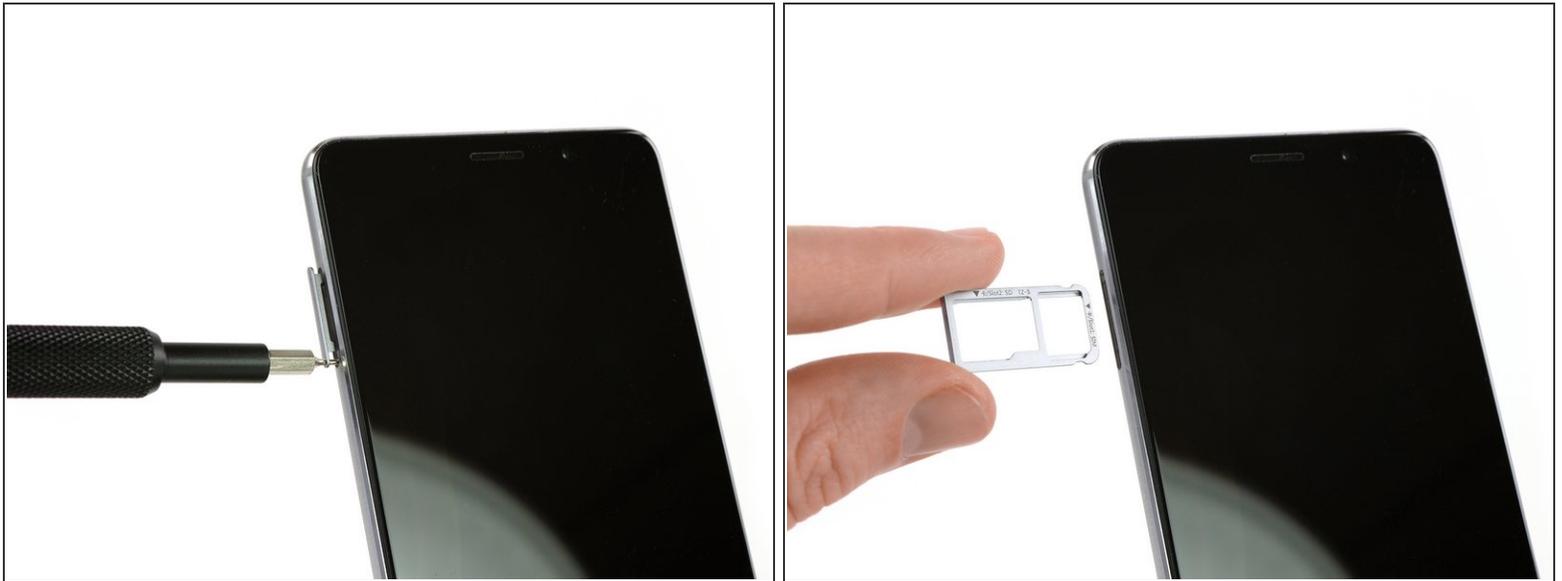

- First switch off your phone and remove the SIM card tray.

Step 2

- Remove both screws on the bottom with a Torx T2 screwdriver.

- Use a plastic opening tool to get between the display and the case. Open the smartphone by carefully prying out the display with all the parts out of the case.

  ⚠ Don't open the phone all the way, yet. The fingerprint sensor cable is still connected to the back cover.

Step 3
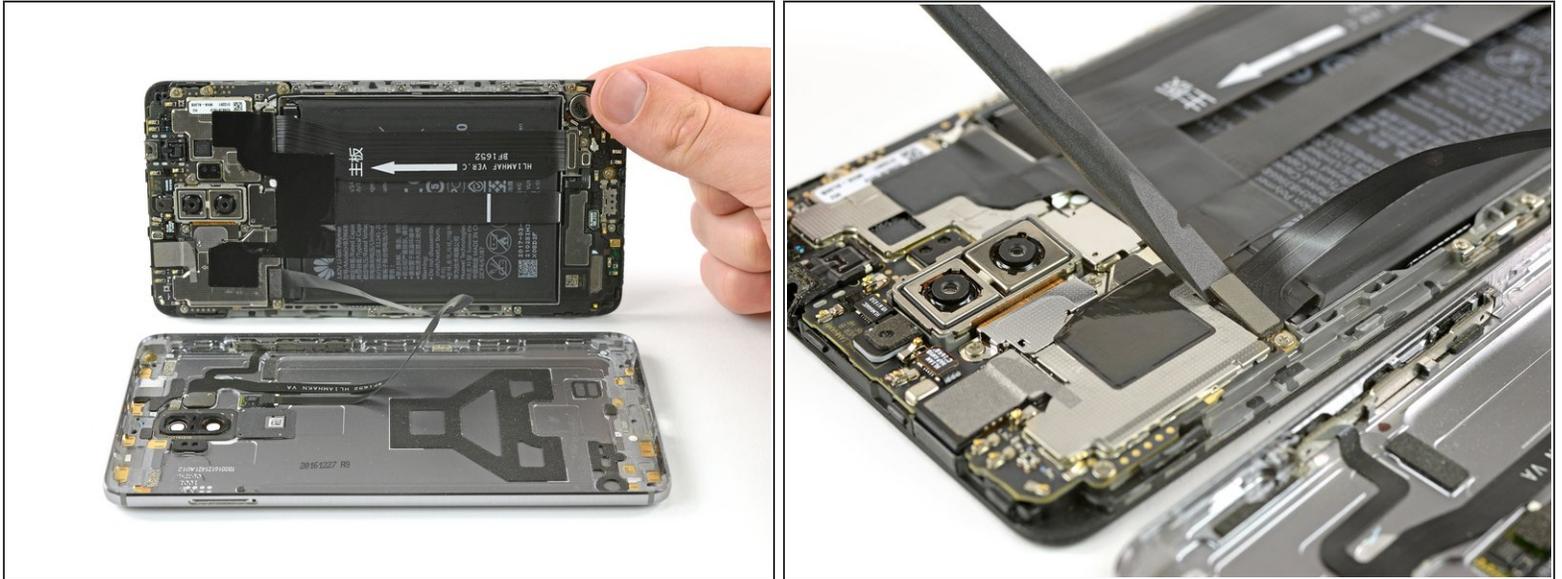

- Swing open the phone to the right side.

- Disconnect the fingerprint sensor cable with a spudger.

To reassemble your device, follow these instructions in reverse order.
