

Bose On-Ear headphones Ear Cushion Replacement

Ear Cushion Replacement

Written By: oldturkey03

INTRODUCTION

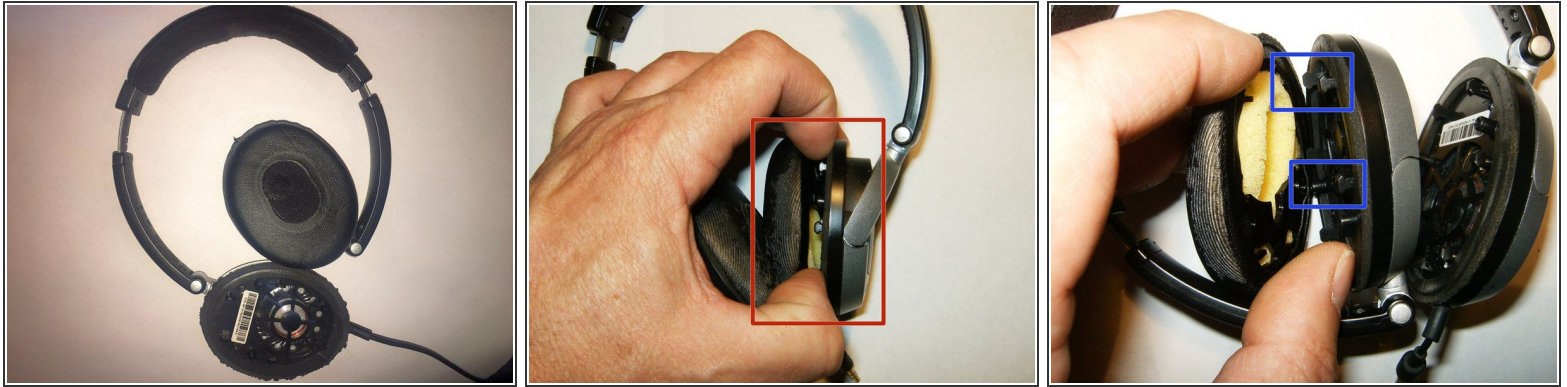

These are Bose On-Ear headphones that I had previously repaired for some other issues. This time the left ear cushion got tore off. Replacement cushions were bought online for less that \$10 USD and since it is a Bose, I figured I could spend that money. The replacement is straight forward and does not require any tools etc.

PARTS:

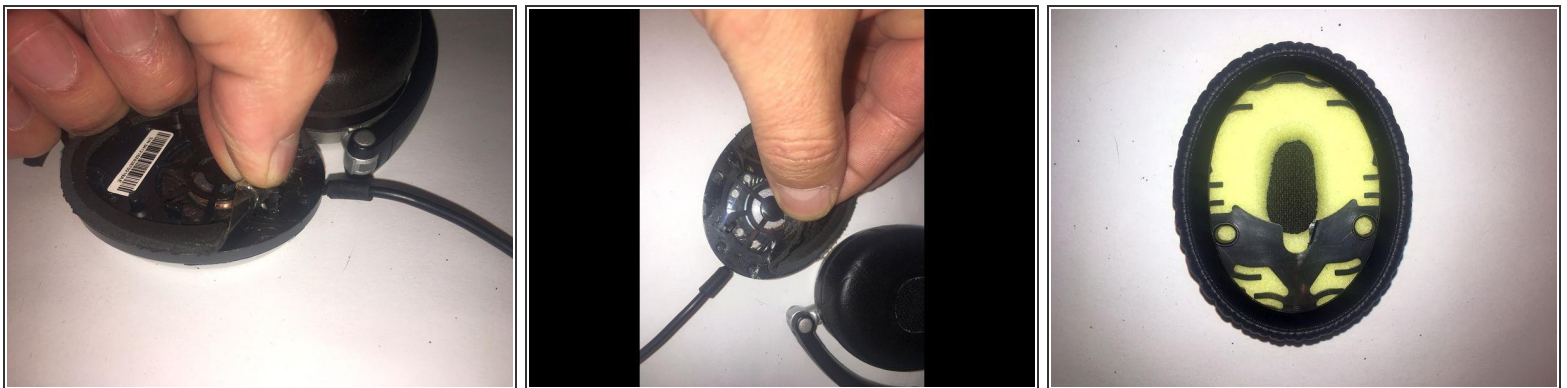

- [Replacement Ear Cushion](#) (1)
-

Step 1 — Ear Cushion

- Here is the Bose Tricore OE headset. Slightly worn and a torn left ear cushion
- To remove an existing ear cushion one would simply be applying a bit of force between the ear pads and the housing. The ear cushion will simply snap off
- This shows the snaps that attach the ear pad to the case.

Step 2

- Since the ear cushion was already torn off on this one, simply clean the mating surfaces from all debris left by the old ear cushion
- All left over foam and adhesive tape needs to be removed. This will ensure a proper fit.
- Here is a look at the back of the replacement cushion.

Step 3

- Position the cushion so that the orientation aligns the two holes with the two pins on the headphones
- Place the new ear cushion on the headphones ensuring the holes and pins are lined up
- A simple squeeze on the ear cushion will snap the plastic to the headphones.

Step 4

- Good as new and ready to jam!

To reassemble your device, follow these instructions in reverse order.
