Step 1 — User Interface Panel

- Remove the four 2.0 mm Phillips screws of the camera using the J00 bit from the 54-bit Driver Kit. There are two screws on both sides.

Step 2

- Remove the 4.0 mm Phillips screw located on the bottom of the camera.
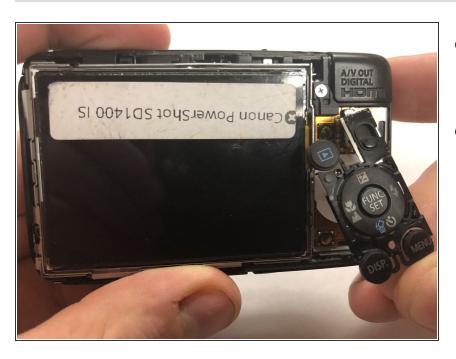

Step 3

- Remove the front face panel of the camera by hand using firm pressure.

- If one point of the face is stuck to the body, check if there is a screw preventing the front face from coming off.

Step 4

- Remove the rear panel of the camera by hand using firm pressure.

Step 5

- Remove the user interface panel by hand. The panel may fall out on its own, this is normal.

- Replace the user interface panel by setting it in position.

To reassemble your device, follow these instructions in reverse order.
