# Yuneec Typhoon H LED Board Replacement

If one of the LED lights fails on one of the propellers, this guide will help you replace the LED board.

Written By: Claire Luce

INTRODUCTION

This guide instructs you to replace the LED lights on your Yuneec Typhoon H drone. The LED lights are important for tracking where your drone is, when flying within line of sight and for other pilots to know where your drone is in the sky.

🔧 TOOLS:

- Phillips #000 Screwdriver (1)

Step 1 — LED Board

ⓘ This guide begins with the propeller already removed.
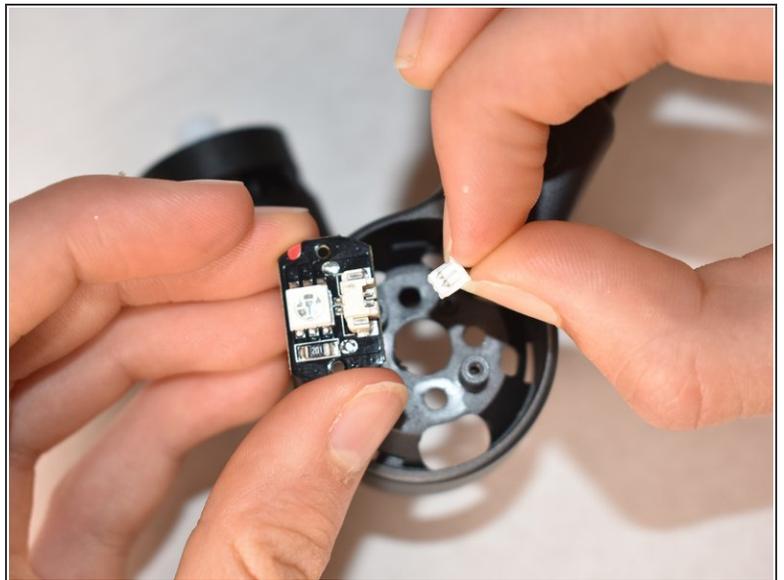

Step 2

- Turn the drone upside down to have easy access to the prop arm.

- Twist out the prop motor clockwise.

Step 3

- Unscrew two 4.9mm screws on the board using a Phillips #000 screwdriver.

Step 4

- Hold the LED board in one hand and pinch the plug at the connection to the board with the other hand.

- Pull the plug out from the connection piece.

To reassemble your device, follow these instructions in reverse order.
