

# How to downgrade iPhone 5/iPad 2,3,4/iPad mini to iOS 8.4.1?

Here's the guide for those users who want iOS 8.4.1 back.

Written By: Grace

## Step 1 — Preparation

- 1. Download or update 3uTools to the latest version. 2. Jailbreak your device. 3. Download the custom ipsw firmware for your device. You can download from: <http://www.3u.com/tutorial/articles/5841...>

## Step 2 — Enter KDFU mode.

- You can add repo: <http://repo.tihmstar.net>, then install kDFUApp. But this method does not support all the compatible devices or iOS 10+. For the rest incompatible devices, you can refer another tutorial to enter kdfu mode: <http://3utools.blogspot.com/2018/01/how-...>

### Step 3 — Downgrade on 3uTools

- Head to “Flash & JB” -> “Pro Flash”, then click “Import Firmware” to import the downloaded custom firmware.

### Step 4

- Click “Flash” on the right side, there will be the pop up telling you there are risks to flash a custom firmware. Just click “Flash Anyway” to start the process.

## Step 5 — Finish

- Then 3uTools will automatically downgrade your device to iOS 8.4.1, please wait patiently and keep the good connection.

To reassemble your device, follow these instructions in reverse order.
