

# Step Guide To Install KDZ Firmware Using LG Flash Tool

LG Flash tool is the only available flashing application for LG smartphones and tablet devices. the tool has the capacity of working with KDZ Files.

Written By: Ana Schumacher

## Step 1 — Preparations And Requirements

- Download the LG flash tool from [lgfalsh.com](http://lgfalsh.com) and extract it on your Windows PC and launch the application

## Step 2 — Turn device In to Download mode

- Boot your mobile device into download mode by power of the device and holding the Volume Up button.

### Step 3 — Connect Devices

- Connet it to the pc using a proper USB cable.

### Step 4 — Load KDZ files

- Then it is the time for you to load the kdz firmware file into LG Flash Tool window on your PC. Click on the browse button at the end of the 'Select KDZ file' line.

## Step 5 — remember

- Once you selected the KDZ file Click on CSE Flash button to start the flashing process Remember: The application consists of two different flashing options as CSE and Normal. CSE method wipes away the all the data available on your device But the normal method does not. If you want to upgrade from a stock firmware, select normal

## Step 6 — Start the process

- Hit on the start button to proceed. it may be asked for administrator permissions for some LG program on your PC, if just accept it. Select the appropriate language.

## Step 7 — Final Step

- Keep in mind not to tick the Smartphone upgrade checkbox, it's for Windows Mobile phones, not your LG device running on Android. Finally, You can start the flashing process. Wait Until it does 100%.

To reassemble your device, follow these instructions in reverse order.
