## Step 1 — Keyboard

⚠ Turn computer off before starting.

● Turn computer over and begin removing noticeable 8mm screws with a Phillips #0 screwdriver.

## Step 2

ⓘ Some screws may be hidden under a screw cover.

● Simply use a metal spudger to pop off the screw cover to unveil the hidden 8mm screw.

ⓘ Screw cover may fly when removing.

## Step 3

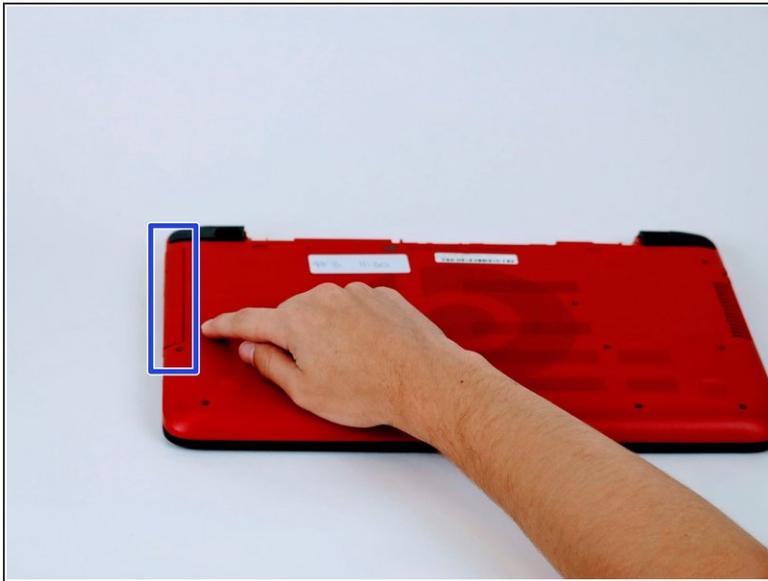

- Once screws are removed you may now remove the optical drive.

- Remove the hidden 3mm screw in the optical drive port.

## Step 4

- Remove the rubberized feet located on the left and right shoulder of the computer to uncover hidden 8mm screws.

- ⓘ Popping noises are normal.

- The shoulder caps are removable. Underneath there are 2 additional screws.

## Step 5

- Flip computer over and wedge metal spudger along the computer to pop off keyboard panel

## Step 6

- Unclip wires connected to the motherboard and remove keyboard from the device.

- ⓘ 17 screws should be removed up to this point.
