

How to fix an iPhone 4S that won't turn on or charge

Written By: Elijah

PARTS:

- [iPhone 4S Screen](#) (1)

This guide does not show you how to replace your screen

Step 1 — Do a forced restart

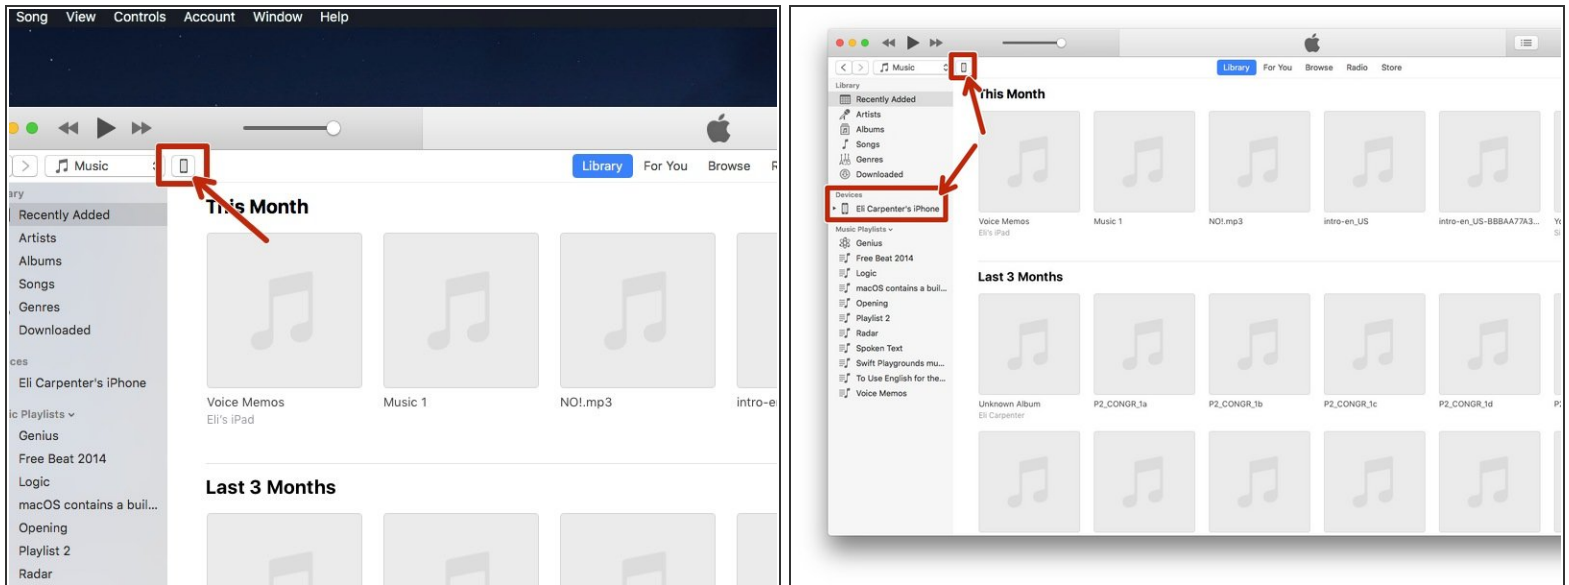

- Press and hold the Power and Home buttons for 10 seconds.
- Wait for about 10 seconds. If you don't see the Apple logo, continue to the next step.

Step 2 — Charge the iPhone

- Try charging the phone for at least 20 minutes.
- You may also want to try using a different charger if you have one.
- If this doesn't work, continue to the next step

Step 3 — See if iTunes recognizes the iPhone

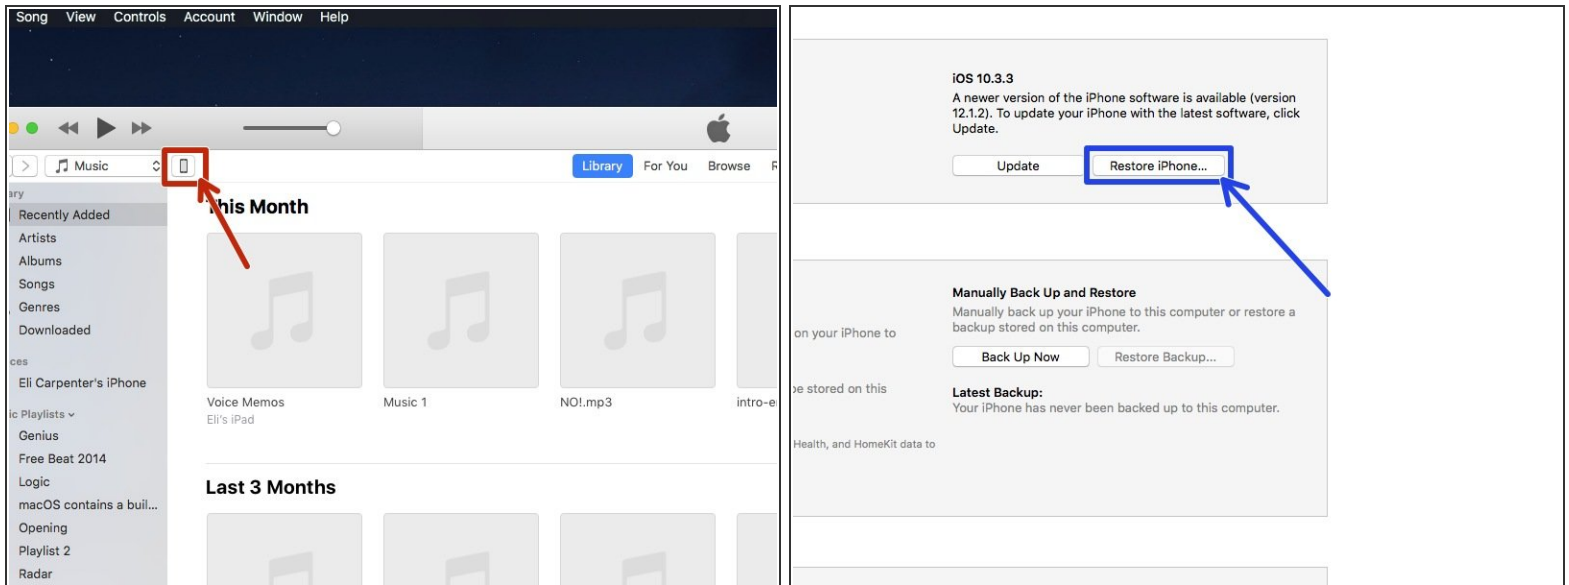

- Try connecting the iPhone to a Windows or Mac computer and launch iTunes (If you don't have iTunes, you can download it at <http://itunes.com/download>) If you don't see an iPhone icon in the toolbar at the top left, continue to step 5
- On macOS Catalina 10.15 or newer, go to the next step

Step 4 — Hold home button while plugging in the charger

- Allow the iPhone to charge for a while
- Then hold down on the home button while plugging in the 30-Pin connector.

Step 5 — Restore the iPhone

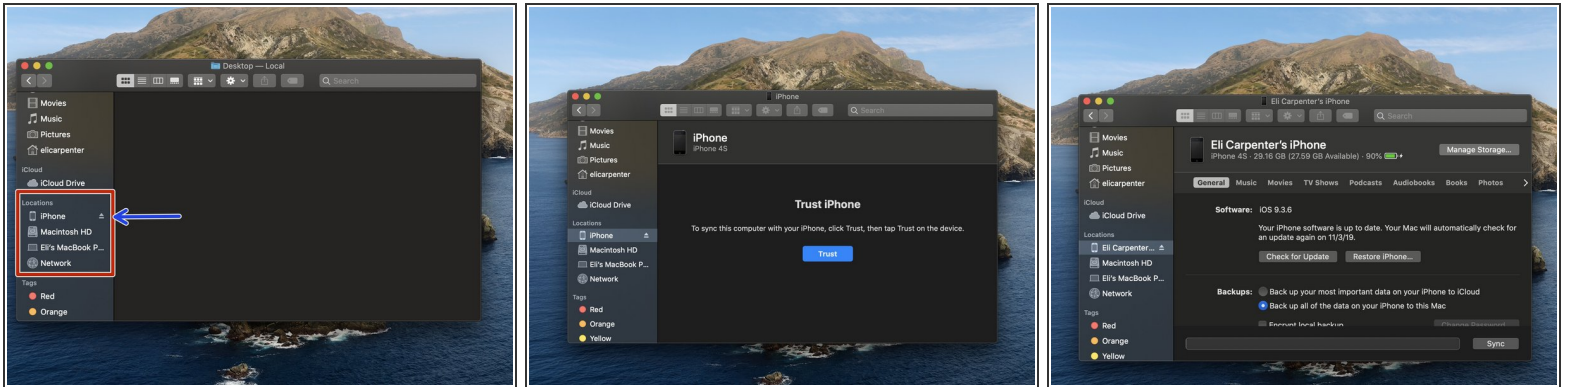

- If the previous step worked but you still can't see anything on the iPhone's screen, you may want to restore the iPhone.

⚠ THIS WILL ERASE ALL THE DATA ON THE IPHONE!

- Connect the iPhone to a Windows or Mac computer and open iTunes, click the iPhone icon in the toolbar at the top left.
- Click the "Restore iPhone" button at the top right to restore the iPhone.

Step 6 — Instructions for macOS 10.15 and newer

- Hold the control key while clicking on the Finder icon and select "New Finder Window"
- In the Sidebar, look for the iPhone under "Locations", if you see the iPhone, select it.
- You may be prompted to trust the iPhone to the computer.
- If you don't see the iPhone then go to the next step.

If you fixed it then CONGRATS! If you didn't fix it then, You may want to consider replacing the screen on the iPhone.
