TOOLS:

- [Tournevis Cruciforme PH1](#) (1)
- [New Item](#) (1)

PARTS:

- [New Item](#) (1)
-

Step 1 — How to LG G3 fix GPS issue

- Shutdown your phone
- Get out the rear case of your phone
- Unscrew all screws identified in red on the photo
- Remove all plastic pieces using your nails or a plastic tool

Step 2

- Unstick carefully the 3 metal stickers (connectors) identified in white on the photo with a flat screwdriver. Be careful these stickers are breakable.
- Cut some thick papers or cardboard to the size of each sticker.
- Stick under each sticker a cut piece of paper / cardboard in order to make a thickness
- Put the stickers back to their initial location (they will not stick again but it not important).

Step 3

- Reassemble the phone by following the previous steps backwards

To mount again your phone, follow the previous steps in the inversed order.
