

iPhone XS Rear Camera Lens Cover Replacement

Use this guide to replace the broken rear...

Written By: cPix

INTRODUCTION

Use this guide to replace the broken rear camera lens of an iPhone XS. Carefully remove the glass fragments to avoid damaging the camera underneath.

Step 1 — Remove the broken glass

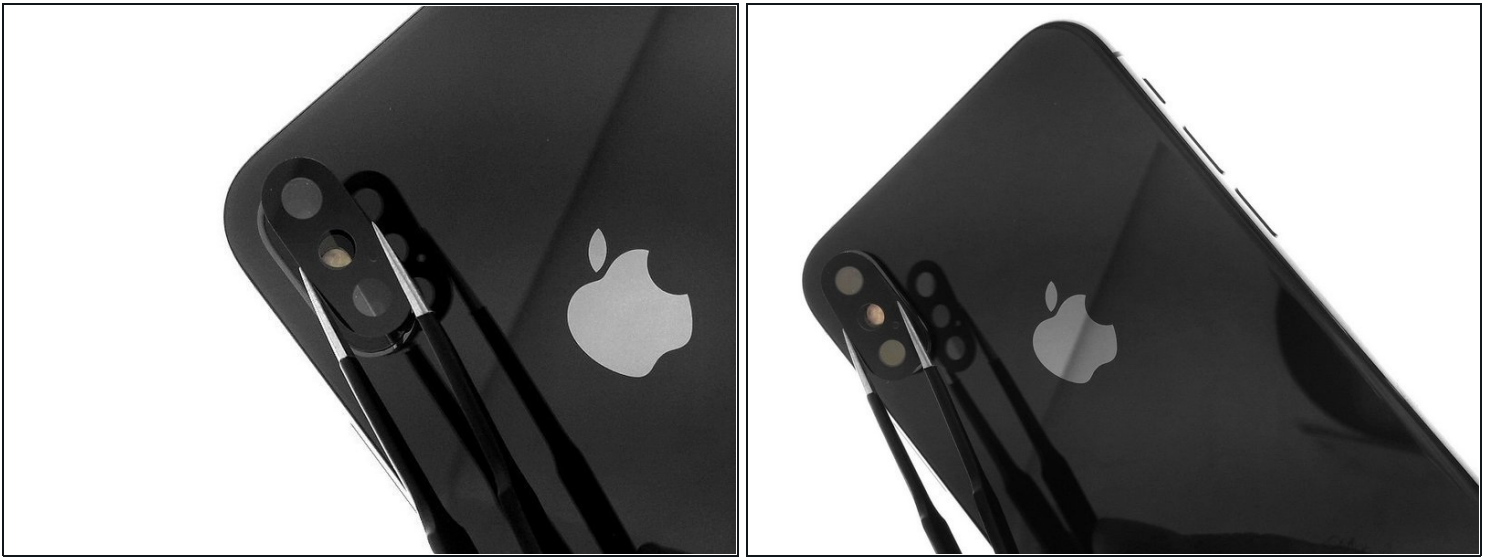

- First, remove the shards of glass from the broken camera lens.

Step 2 — Clean the camera deck

- Once the glass shards have been removed, thoroughly clean the contour of the camera deck.

Step 3 — Install the new lens

- Stick some double sided tape or two dots of glue on the new iPhone XS rear camera cover.
- Use tweezers to position the glass lens in its housing.

Step 4 — Fixing the lens

- Lightly press down on the lens for a few seconds to stick it down correctly.
- Test your rear camera to make sure your photos and videos have the right definition.

Congratulations ! You have replaced the rear camera lens of your iPhone XS. Clean it with a microfiber cloth before taking photos or filming.
