

iMac 2019 Display Separation

Prereq-only guide to separate the display on a 2019 iMac.

Written By: Adam O'Camb

INTRODUCTION

Prereq-only guide to separate the display on a 2019 iMac.

TOOLS:

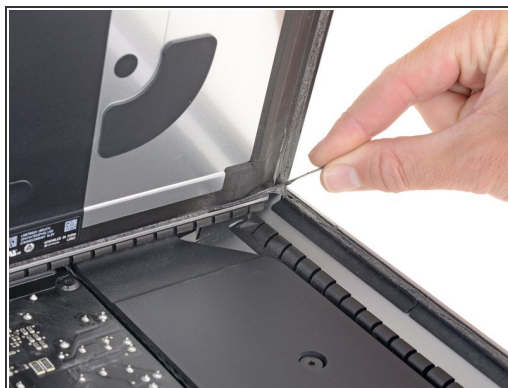

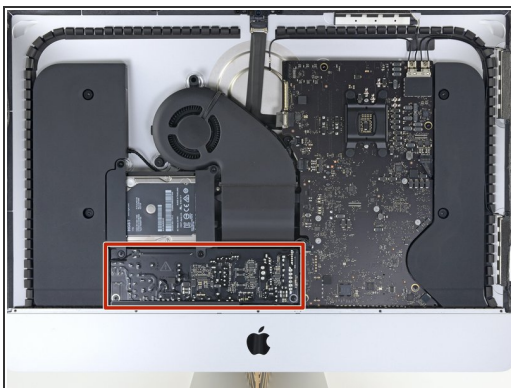

- [Spudger](#) (1)
 - [iMac Opening Wheel](#) (1)
 - [Plastic Cards](#) (1)
 - [Tweezers](#) (1)
 - [iMac Intel 21.5" Cardboard Service Wedge](#)
(1)
-

Step 1 — Separate the display

- Lift the display up to a near-vertical position.
- ⓘ At this point there is still a strip of adhesive along the bottom of the display that will hold the display to the frame like a hinge. You can loosen this adhesive by working the display up and down a few times.

Step 2

- ⓘ If necessary, a plastic card can be used to cut any remaining sections of the bottom adhesive strip.

Step 3

- Lift the display up from the frame and remove it from the iMac.
- It may be necessary to slowly lift from one side to peel against the remaining adhesive.

⚠ Be very careful handling the display—it's big, heavy, and made of glass.

- ☑ After the adhesive is cut, it cannot be used to re-seal the display in place. Follow [this guide](#) to replace the adhesive strips that secure the display to the rear enclosure.

To reassemble your device, follow these instructions in reverse order.
