**Step 1 — Earmuffs**

- First you need to pull the earmuffs out. It is really easy.

---

**Step 2**

- Than you need to use 1 phillips head screwdriver to take out the 4 screws.
Step 3

- You need to pry these plastic pins. You need to use a lot of force. The best method that worked for me to use a Spudger and a Metal Spudger. But you can try with an iFixit Opening Picks.

Step 4

- After you're done, you can see the battery.
Step 5

- The other side is similar. You have to do the same things.

To reassemble your device, follow these instructions in reverse order.
