

Powering Down the Dell Precision T3400

This guide will show you how to properly power down the Dell Precision T3400 in order to begin working on the PC.

Written By: Jenalina Santiago

Step 1 — Power down the PC.

- If your PC is on, shut it down.
- Unplug the PC from the wall.
- Disconnect the power cable from the tower, unplug keyboards, monitors, or any other devices, and remove any USB devices.
- ⓘ Press the power button after completely shutting down the PC. This will "ground" the motherboard, preventing any short circuiting from occurring.

To reassemble your device, follow these instructions in reverse order.
