INTRODUCTION

As this replacement guide works on an external component of the Xoom Wifi, there are no prerequisite steps.

🔧 **TOOLS:**

- T5 Torx Screwdriver (1)
- iFixit Opening Tools (1)

⚙️ **PARTS:**

- Motorola Xoom Back Cover (1)

  This only applies if the intention is to replace the back cover. Removal alone does not warrant needing a new one.

Step 1 — Back Cover Disassembly

- There are two 6.6 mm screws that hold ports into place as well as the back panel. Remove these with a T5 Torx screwdriver.

Step 2

- Apply light pressure with hand and slide the back plate till it stops in this position.

- There is a flex clip on both sides that need to be pushed down in order for the plate to slide off completely. Use a plastic opening tool to release the flex clips. They are located under the back cover near the sides.

- As soon as the clips are released the back should slide off.

Step 3

- Remove last two 4.2 mm screws from the remaining back piece with a T5 Torx screwdriver.

- Once both screws are taken out, lift the rest of the backing out of the way.
