

Blu Studio HD 6.0 SIM Card Replacement

This guide is for installing a SIM card for the Blue Studio 6.0 HD.

Written By: Alec

INTRODUCTION

You don't always have to go to your carrier to install your SIM card. Installing a SIM card is a relatively easy process. Follow this guide on how to change or install a SIM card for the BLU Studio 6.0 HD.

TOOLS:

- [iFixit Opening Tools](#) (1)

Step 1 — Rear Case

- Begin by making sure your Blu Studio is turned off.

Step 2 — Back Panel.

- To begin the removal of your back panel, first locate the lift tab on the bottom-right corner.

Step 3

- Next, gently slide your thumb (or plastic tool if you prefer) down the seam running the length of your Blu Studio until the rear panel is completely removed.
- Your rear panel should be placed nearby and in a safe location until you are finished with your task.

Step 4 — Find out if your Blu Studio 6.0 is "unlocked."

- Look at the sticker on top of the battery housing and note the model, part number and type.
- Research this information to find out if you have an unlocked version of the phone.
- ⓘ If your phone is unlocked you can use any mobile network SIM card. If not you must replace the SIM card with a card from your carrier.

Step 5 — Installing the SIM Card

- If necessary slide the unneeded SIM card out of it's slot.
- ⓘ Make sure your new SIM card has been activated by the carrier.
- Take the front end tip of the SIM card (the side with the corner cut) and slide it gently into the SIM card slot.

Step 6 — Turn the phone on

- Turn on your Studio 6.0 and test it to make sure that everything is working.
- If your phone gives you an error, check your SIM card installation. If everything seems to be correct make sure your SIM card is activated.
- If everything is working you're good to go.

To reassemble your device, follow these instructions in reverse order.
