

# Toshiba Satellite 1805-S177 Keyboard Replacement

Keys stuck? Replace your old, broken keyboard with this guide!

Written By: Hannah

---

## INTRODUCTION

Oftentimes, things get stuck in between keys, or keys labels get worn out with use. This guide will assist in replacing that broken keyboard with a new one.

---

### TOOLS:

- [Flathead Screwdriver](#) (1)
  - [Phillips #00 Screwdriver](#) (1)
  - [Spudger](#) (1)
-

## Step 1 — Keyboard

- Stick a spudger in one of the sides of the top panel. Lift slowly from one side to the other and it will pop off.

## Step 2

- Using an Phillips screwdriver, unscrew and remove two screws labeled B2.6.

### Step 3

- Using your hands, lift keyboard up toward you, starting from the edge closest to the screen.

⚠ The keyboard is still connected to the laptop by a ribbon. Place the keyboard gently on top of the trackpad, keys side down.

### Step 4

- Find the white ribbon connector (where the keyboard is still attached to the rest of the laptop).
- Slide the white ribbon connector up and lift the ribbon out of it.

To reassemble your device, follow these instructions in reverse order.
