## Step 1 — Battery Pack

- Remove the battery pack cover.
- Remove batteries.

## Step 2 — Side Handles

**i** We recommend using a nylon spudger for this step. A metal spudger is shown.

- Grip the controller firmly to remove the side handles, wedging a spudger into the seam between the front and handle plates.
- Pry the side plate away from the front plate by moving the spudger back and forth. You will need to do this all the way around the side plate's seam.

## Step 3 — Screws

- i There is a hidden screw located in the middle of the controller behind the label.
- Use a screwdriver and punch a hole directly in the center of the label.
- i You may also lift the label if you do not want to puncture it.
- Remove the five 10mm screws located on the back of the controller using the T8 Security Torx Screwdriver.

## Step 4 — Backplate

- Remove the backplate.

## Step 5 — Faceplate

- Remove the faceplate.
