INTRODUCTION

This is a simple guide to help users replace damaged or missing foam ear pads in their Xbox One Stereo Headset. The replacement should only take a couple of minutes, and only requires a metal spudger and a foam-safe, all purpose adhesive.

TOOLS:

- [Metal Spudger](#) (1)
 - [Super Glue](#) (1)
-

Step 1 — Foam Ear Pads

- Insert the metal spudger between the foam ear pad and the black plastic speaker cover.

Step 2

- Carefully slide the spudger between the ear pad and the speaker cover, along the seam, to remove the adhesive.

Step 3

-  Be careful not to tear the cloth ear pad cover.
- Using your fingers, carefully pull the ear pad out from the black cloth cover.
-  When reinserting the foam ear pad, you may want to use a foam-safe adhesive to secure the back side of the foam to the plastic speaker cover.

To reassemble your device, follow these instructions in reverse order.
