

Removal/Replacement of Dell Inspiron E1705 Hard Drive

How to remove and install your computers hard disk drive.

Written By: Malik Shahbal

INTRODUCTION

To begin, make sure to remove the battery before doing anything else.

TOOLS:

- [Phillips #1 Screwdriver](#) (1)

PARTS:

- [750 GB Hybrid Seagate Hard Drive \(New\)](#) (1)

Step 1 — Battery

- ⚠ Make sure that the computer is turned off and is disconnected from external power source.
- Turn it upside down and locate the battery release switch.

Step 2

- While holding the switch in the open position, lift out the battery.
- ⓘ If you plan to work on any internal laptop components, press and hold the power button for 5 seconds. This will dissipate any residual charge on the motherboard to prevent electrical shock when you begin to handle it.

Step 3 — Hard Drive

- Remove the two Phillips #1 screws on the left side of the computer, just above the battery compartment.
- ⓘ These screws hold the hard drive tray into the hard drive compartment.

Step 4

- Slide the hard drive tray out of the hard drive compartment.

To reassemble your device, follow these instructions in reverse order.
