 **TOOLS:**

- [T4 Torx Screwdriver](#) (1)
- [Phillips #00 Screwdriver](#) (1)
- [Spudger](#) (1)
- [iFixit Opening Tools](#) (1)

 **PARTS:**

- [GoPro Hero3 Silver Image Sensor](#) (1)
- [GoPro Hero3 Silver Front Panel](#) (1)

## Step 1 — Battery

- Pull back on the tab on the back of GoPro to open the battery cover.

## Step 2

- Pull the battery out using the tab.

### Step 3 — Image Sensor

- Use the plastic opening tool to remove the faceplate.
- There is some adhesive and clips so be careful and the faceplate should pop right off.

### Step 4

- Now that the faceplate is off, it is time to remove the 4 screws on each corner.
- Use the T4 tool bit from the iFixit toolkit in order to remove the 4 screws on each corner.

## Step 5

- Note: Make sure you remove the door cover of the USB, mini HDMI, and SD port before. Separating the motherboard will be easier.
- Using the plastic opening tool, slowly pry open the motherboard assembly.

## Step 6

- Use the spudger to gently pry off the connector of the housing to the motherboard.
- You should now have the motherboard assembly and the housing separated.

## Step 7

- Use the spudger to remove the heat shield tape and detach the image sensor from the motherboard.
- Using the T4 Torx toolbit, remove the 4 screws that connect the sensor to the lens.

## Step 8

- Remove the silver connector of the image sensor from the motherboard using the spudger to pry it off.
- You should now be able to remove the image sensor by simply pulling it.

To reassemble your device, follow these instructions in reverse order.
