Step 1 — Rear Case

- With your fingers, carefully pry off the back plastic casing. Starting at the corners is usually the easiest.

- (i) The rear-facing camera seems to fit a little too snugly in its compartment on the rear case; so make sure that it stays connected to the motherboard.

Step 2 — Front Facing Camera
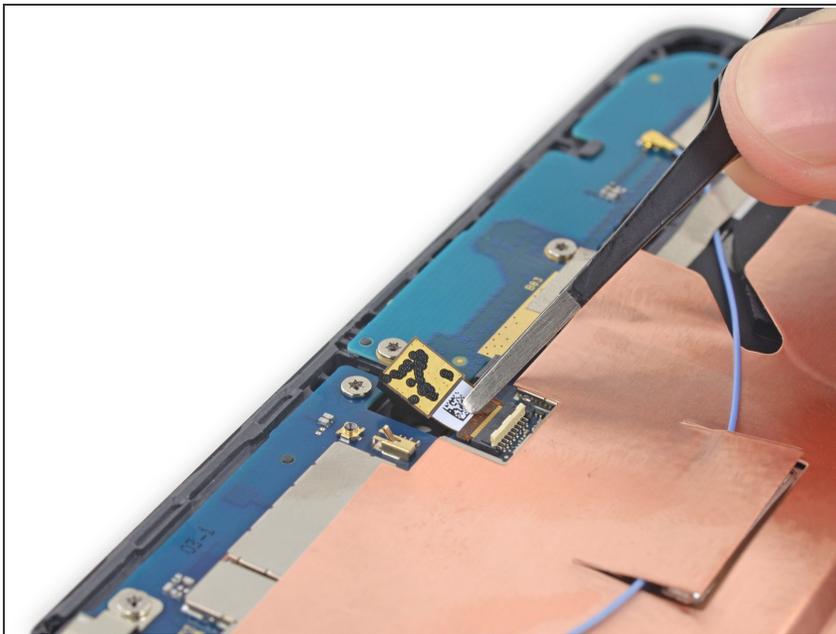

- Use a spudger to disconnect the front-facing camera ZIF connector.

- Use a pair of tweezers to gently lift the front-facing camera up from the motherboard.

To reassemble your device, follow these instructions in reverse order.
