Step 1 — Back Casing

- Insert a plastic opening tool into the seam between the back casing and the screen to separate the back casing from the tablet.
- ⚠ You may need to use a metal opening tool for extra prying power, but beware that it can scratch your device or damage the internal components if the tool is inserted too deep.
- ⓘ You will hear the tabs pop as you separate the back casing around the tablet.

Step 2

- Lift the back casing away from the rest of the device which should include the exposed circuit board and screen.
- Set the casing aside.

To reassemble your device, follow these instructions in reverse order.
