MacBook Core 2 Duo Memory Cover Replacement

Written By: iRobot
INTRODUCTION

This keeps the RAM levers out of the way of the battery and secures the hard drive.

TOOLS:
- Coin (1)
- Phillips #00 Screwdriver (1)

PARTS:
- MacBook Memory Cover (1)
**Step 1 — Battery**

- Use a coin or spudger to rotate the battery-locking screw 90 degrees clockwise.

---

**Step 2**

- Lift the battery out of the computer.
Step 3 — Memory Cover

- Unscrew the three evenly-spaced Phillips screws from along the rear wall of the battery compartment.

- The screws are captive to the metal memory cover so you cannot lose them.

- Using The Flexible Extension sold by iFixit will help with this step.

Step 4

- Rotate the L-shaped memory cover so it clears the battery compartment opening and lift it up and out of the computer.

To reassemble your device, follow these instructions in reverse order.
