

Blade Removal Technique

If your blades get fused to each other, to the cup, or to the motor, this guide will show you how to carefully remove them.

Written By: Kamal Taha

INTRODUCTION

This guide will show you several blade removing techniques for when the blades are stuck somewhere on the motor. Be sure to have a tough cloth or a cut resistant glove on hand.

TOOLS:

- [Soft Cloth](#) (1)
-

Step 1 — Blade Removal Technique

- To remove the blades from each other, twist both blades in opposite directions and pull.

 Be cautious, the blades are sharp.

Step 2

- To remove the blades from the cup. Firmly grasp the bottom of the cup.

 Next pull upward as shown on the top of the blades. Be careful when you are doing this step.

Step 3

- To remove the blades from the motor, firmly grasp the motor top.
 - Next. Take a cloth or cut-resistant glove and grasp the blades.
-  Now twist both ends in opposite directions to separate. Be careful during this step.
