## Step 1 — Back Cover

⚠️ Make sure the phone is powered off.

● Remove the rear cover by placing the plastic opening tool in the groove on the bottom left side of the LG G4 and gently prying up.
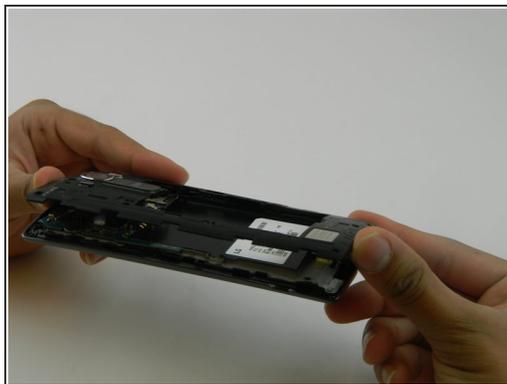

Step 2

● Place the plastic opening tool at the bottom edge of the battery and lift up. Carefully remove battery with your hands.

Step 3

- Remove the **eleven** 3.9 mm Phillips #00 screws found at the back of the phone.

Step 4

- Once all the screws have been removed, place the plastic opening tool in the lower left corner and firmly lift the cover up.

- Detach the cover with your fingers

Step 5 — Front Camera

- Detach the Front Camera ribbon cable located on the top right corner of the back of the phone by gently lifting it up with a plastic opening tool. Remove the front camera.

⚠ Be careful when removing the cables and pulling out the front camera to avoid tearing the attached cable.

To reassemble your device, follow these instructions in reverse order.
