Repairing Puppet Strings

If the strings on your puppet are severed or tangled, this is a simple guide for replacing the strings on your puppet so that it may be restored.

Written By: Stephanie Gummelt
INTRODUCTION

In order to restring your puppet, you will need:

- Fishing line
- Scissors
- A sewing needle
- Tape or glue
- Two equally sized wooden sticks (such as chopsticks or pencils)

Note: The glue, tape, and sticks are only needed if you are restoring a handle, also.

TOOLS:

- Utility Scissors (1)
- Fishing Line (1)
- Super Glue (1)
- Hand Sewing Needle (1)
- Dowel Rod (1)
**Step 1 — Repairing Puppet Strings**

- Detach the severed/damaged strings. This can be done by cutting them or carefully pulling them out.

**Step 2**

- Thread the fishing line through the needle as you would with thread and tie a simple knot to secure the fishing line.
- Note: Tying the knot can be tedious, so it may take a few tries.
**Step 3**

- Insert the needle into a secure part of the puppet's feet or other necessary puppet part.

- Note: The material may resist the needle at first.

**Step 4**

- Pull the needle through the puppet part and tie another simple knot directly onto the location that was threaded through.

- Note: You may want to tie a few simple knots for extra security.
Step 5

- If you need to make a handle, take the two wooden sticks and cross them to where they are perpendicular to each other.

Step 6

- Secure the two sticks with tape or glue where the two sticks cross.

- Note: Tape is a faster fix, but may appear messier.
To reassemble your device, follow these instructions in reverse order.
