

Steelseries Rival 700 Gaming Mouse Nameplate Replacement

The "RIVAL" back side nameplate can be replaced with a customized 3D user-printed one.

Written By: Vincent Monteil

INTRODUCTION

The "RIVAL" back side nameplate can be replaced with a customized 3D user-printed one.

PARTS:

- [Steelseries Rival 700 Nameplate](#) (1)
-

Step 1 — Disconnect the mouse from your computer

- To avoid electronically damaging either your computer or your mouse, unplug the usb cable from its socket.

Step 2 — Disconnect the cable from the mouse

- The Rival 700 mouse is a non wireless mouse. The micro-USB cable end is an elbow socket, secured by a plastic clip.
- To **disconnect** the cable from the mouse, firmly press the plastic clip using your thumb

Step 3 — Nameplate removal

- The original nameplate is a soft rubber one that can be removed just by pulling it softly out of its socket.
- **WARNING:** When reassembling, if you're using a custom nameplate that may not be as stretchable as the original one, insert it softly, and use a lime tool on the new part to avoid damaging the mouse socket.

Step 4 — Nameplate printing

- You will be able to download the 3D files to design a custom nameplate on the Steelseries website. The link is also provided in the part description.
- On this picture, the original "RIVAL" nameplate will be replaced with a new one on which i just had my Twitch ID printed.
- Be creative, use colored plastic, put logos and drawings on your mouse.

To reassemble your device, follow these instructions in reverse order.
