iPhone 7 Rear Case Replacement

Replace the rear case in an iPhone 7.

Written By: Scott Havard
**INTRODUCTION**

Use this guide to remove all components from the rear case of your iPhone 7. This guide will show you how to remove speaker vents, button cables, and button covers so you can replace a dented or bent cover.

### TOOLS:
- Standoff Screwdriver for iPhones (1)
- P2 Pentalobe Screwdriver iPhone (1)
- iOpener (1)
- Suction Handle (1)
- Spudger (1)
- iFixit Opening Picks set of 6 (1)
- Tri-point Y000 Screwdriver Bit (1)
- Tweezers (1)
- Phillips #000 Screwdriver (1)
- SIM Card Eject Tool (1)
- Halberd Spudger (1)
- ESD Safe Tweezers Blunt Nose (1)
- Plastic Cards (1)

### PARTS:
- iPhone 7 Blank Rear Case (1)
- iPhone 7 Upper Cable Bracket (1)
- iPhone 7 Top Left Antenna (1)
- iPhone 7 Rear Camera Connector Bracket (1)
- iPhone 7 Rear Camera Lock Bracket (1)
- iPhone 7 Front Panel Clips (1)
- iPhone 7 7 Plus Hold Switch Gasket (1)
- iPhone 7 Speaker and Microphone Mesh Set (1)
- iPhone 7 Display Assembly Adhesive (1)
- iPhone 7 OEM Rear Case (1)
Step 1 — Pentalobe Screws

Before you begin, discharge your iPhone battery below 25%. A charged lithium-ion battery can catch fire and/or explode if accidentally punctured.

- Power off your iPhone before beginning disassembly.
- Remove the two 3.4 mm pentalobe screws on the bottom edge of the iPhone.

Opening the iPhone's display will compromise its waterproof seals. Have replacement seals ready before you proceed past this step, or take care to avoid liquid exposure if you reassemble your iPhone without replacing the seals.
Step 2 — iPhone 7 Opening Procedure

Heating the lower edge of the iPhone will help soften the adhesive securing the display, making it easier to open.

- Use a hairdryer or prepare an iOpener and apply it to the lower edge of the iPhone for about a minute in order to soften up the adhesive underneath.

Step 3

- Attach a suction cup to the lower half of the display assembly, just above the home button.

- Be sure the suction cup does not overlap with the home button, as this will prevent a seal from forming between the suction cup and front glass.
Step 4

- Pull up on the suction cup to create a small gap between the display assembly and the rear case.
- Insert the flat end of a spudger into the gap.
  - The watertight adhesive holding the display in place is very strong, and creating this initial gap takes a significant amount of force. If you're having a hard time opening a gap, rock the screen up and down to weaken the adhesive until you can fit a spudger inside.

Step 5

- Slide the spudger to the left along the lower edge of the iPhone.
- Twist the spudger to widen the gap between the display and rear case.
Step 6

- Slide the spudger up the left side of the iPhone, starting at the lower edge and moving towards the volume control buttons and silent switch.

⚠️ Do not pry along the top edge of the phone, you risk damaging the plastic clips securing the display.

Step 7

- Insert the flat edge of a spudger into the bottom right corner of the device.
- Twist the spudger to widen the gap between the display assembly and the rear case.
- Slide the flat end of the spudger up the right side of the phone to break up the adhesive holding the display in place.
Step 8

- Pull up on the suction cup to lift up the display and open the iPhone.

⚠️ **Do not raise the display more than 10°** as there are ribbon cables along the right edge of the device connecting the display to the logic board.

Step 9

- Pull up on the small nub on the suction cup to remove it from the front panel.
Step 10

- Slide an opening pick along the top edge of the iPhone, between the rear case and front panel, to break up the remaining adhesive holding the screen in place.

⚠️ Be careful not to damage the plastic clips on the top edge of the phone.

Step 11

- Pull the display assembly slightly away from the top edge of the phone to disengage the clips holding it to the rear case.

- Open the iPhone by swinging the display up from the left side, like the back cover of a book.

⚠️ Don't try to fully separate the display yet, as several fragile ribbon cables still connect it to the iPhone's logic board.
Step 12 — Battery Disconnection

- Remove four tri-point Y000 screws securing the lower connector bracket, of the following lengths:
  - Three 1.2 mm screws
  - One 2.4 mm screw

Throughout this repair, keep track of each screw and make sure it goes back exactly where it came from to avoid damaging your iPhone.

Step 13

- Remove the lower connector bracket.
Step 14

- Use the point of a spudger to lift the battery connector out of its socket on the logic board.

ℹ️ Bend the connector cable up slightly to prevent it from making contact with the socket and providing power to the phone.
Step 15 — Display Assembly

⚠️ Make sure the battery is disconnected before you disconnect or reconnect the cables in this step.

- Use a spudger or a fingernail to disconnect the two lower display connectors by prying them straight up from their sockets on the logic board.

⚠️ To reconnect these cables, press down on one end until it clicks into place, then repeat on the opposite end. **Do not** press down on the middle. If the connector is even slightly misaligned, the connector can bend, causing permanent damage.

⚠️ If you have a blank screen, white lines on the display, or partial or complete lack of touch response after reassembling your phone, try disconnecting and carefully reconnecting both of these cables and make sure they are fully seated.
Step 16

- Remove the two 1.3 mm Phillips screws securing the bracket over the front panel sensor assembly connector.

- Remove the bracket.

Step 17

- Disconnect the front panel sensor assembly connector from its socket on the logic board.

⚠️ This press connector should also be reconnected one end at a time to minimize the risk of bending.
Step 18

- Remove the display assembly.

During reassembly, pause here if you wish to replace the adhesive around the edges of the display.

Step 19 — Barometric Vent

- Remove the two 1.9 mm Phillips screws securing the barometric vent to the rear case.
Step 20

- Remove the vent.

Step 21 — Taptic Engine

- Use the flat end of a spudger to disconnect the Taptic Engine connector from its socket on the logic board.
Step 22

- Remove the three 1.6 mm Phillips screws securing the Taptic Engine to the rear case.

Step 23

- Remove the Taptic Engine.
Step 24 — Speaker Assembly

- Remove the Phillips screw securing the Wi-Fi diversity antenna to the rear case:
  - One 3.2 mm screw

Step 25

- Remove the following three Phillips screws securing the speaker to the rear case:
  - Two 1.3 mm screws
  - One 2.0 mm screw
Step 26

- Use the point of a spudger to lift the two antenna cable connectors up off of the sockets on the logic board.

Step 27

- Use tweezers to derout the antenna cables from their bracket on the logic board.
Step 28

- Use tweezers to remove the antenna cables from the clip on the speaker.
  
  ⚠️ Make sure to grasp the cable near the clip in order to avoid damaging the cable.

Step 29

- Use the tip of a spudger to slide the speaker assembly towards the logic board and off of the rear case.
Step 30

- Remove the speaker.

Step 31 — SIM Card

- Insert a SIM card eject tool or a paperclip into the small hole in the SIM card tray.

- Press to eject the tray.
  
  
  ⚠️ This may require a significant amount of force.

- Remove the SIM card tray assembly from the iPhone.

  🚧 When reinserting the SIM card, ensure that it is in the proper orientation relative to the tray.
Step 32 — Logic Board Connectors

Use the flat end of a spudger to disconnect the rear-facing camera connector.

Step 33

Remove the following Phillips screws securing the rear camera bracket to the rear case:

- One 1.3 mm screw
- One 2.5 mm screw
Step 34

- Remove the bracket.

Step 35

- Use the pointed end of a spudger to pry up and disconnect the antenna bus connector, just left of the rear camera module.
Step 36

- Remove the two 1.2 mm tri-point screws securing the upper cable bracket.

Step 37

- Remove the upper cable bracket.
Step 38

- Use the flat end of a spudger to disconnect the upper cable connector.

Step 39

- Remove the Phillips screws securing the Wi-Fi antenna:
  - Three 1.2 mm screws
  - One 1.7 mm screw
Step 40

- Remove the top left antenna.

Step 41

- Remove the following Phillips screws:
  - One 1.3 mm screw
  - One 2.2 mm screw
Step 42

- Remove the bracket.

Step 43

- Remove the 2.2 mm standoff screw from the grounding bracket.

  Standoff screws are best removed using an iPhone Standoff Screwdriver Bit and driver handle.

  In a pinch, a small flathead screwdriver will do the job—but use extra caution to ensure it doesn't slip and damage surrounding components.
Step 44

- Use tweezers to gently bend the logic board grounding bracket out of the way.

Step 45 — Lightning Connector Assembly

- Use the point of a spudger to disconnect the lower cable connector.
Step 46

- Remove the following screws:
  - One 1.4 mm Phillips screw
  - Three 2.2 mm standoff screws

  Standoff screws are best removed using an iPhone Standoff Screwdriver Bit and driver handle.

- In a pinch, a small flathead screwdriver will do the job—but use extra caution to ensure it doesn't slip and damage surrounding components.

Step 47

- Use the point of a spudger to move the SIM card eject plunger out of the logic board's way.
Step 48

- Use the flat end of a spudger to gently lift the battery connector end of the logic board up.

  - Make sure you're not pulling against any cables. If you feel resistance, check all cables, connectors, and components are clear of the board.

Step 49

- Lift the battery connector end of the logic board and pull it up and out of the rear case.

  - Be careful not to snag the logic board on any cables.
**Step 50**

- Remove the 2.9 mm Phillips screw from the lightning connector.

**Step 51**

- Remove the spring contact from the lightning connector.
Step 52

- Remove the two 1.6 mm Phillips screws securing the lightning connector cable in place.

Step 53

- Remove the two stickers covering the screws that secure the lightning connector to the bottom of the rear case.
Step 54

- Remove the two 1.3 mm Phillips screws from the rear case.

Step 55

- Use the pointed end of a spudger to separate the two microphones from the bottom of the rear case.
Step 56

Heating the lower edge of the iPhone will help soften the adhesive securing Lightning connector cable, making it easier to remove.

- Use a hairdryer or reheat your iOpener to heat the lower edge of the phone.
- Wait for about a minute, allowing the adhesive to warm up before proceeding to the next step.

Step 57

- Starting from the middle of the phone, slide an opening pick underneath the lightning connector to separate it from the rear case.
Step 58

- Continue to slide the pick towards the lightning connector to further separate the assembly from the rear case.

Step 59

- Continue to slide the pick underneath the lightning connector assembly.
- Stop sliding the pick once it passes the battery.
Step 60

- Starting at the corner of the phone, slide the pick underneath the assembly towards the lightning connector.
- Stop sliding the pick when it is reaches the lightning connector.

Step 61

- Gently pull the lightning connector out of its hole on the rear case.
Step 62

- Slide a pick below the lightning connector to further separate the lightning connector assembly from the rear case.

- Continue to slide the pick until the lightning connector assembly is no longer adhered to the rear case.
Step 63

- Remove the lightning connector assembly.

Before installing or replacing the Lightning connector assembly:
- Use a plastic tool to scour any bits of adhesive residue from the rear case.
- Make sure the Lightning connector assembly is correctly positioned so that the two white dots on the iPhone's rear case show through the two circular cutouts in the Lightning flex cable. If they don't, the flex cable will remain misaligned and you won't be able to reconnect it to its socket on the logic board.
Step 64

A rubber gasket on the bottom of the Lightning connector protects your iPhone from liquid and dust intrusion. If you are installing a new Lightning connector assembly, you may need to carefully remove and transfer the gasket to the new part.

The small adhesive patch on the bottom of each microphone also protects your iPhone from liquid and dust intrusion. For best results, replace the two adhesive patches before installing your Lightning connector assembly.

Step 65 — Rear Case Battery

Use a pair of tweezers with blunt tips to peel back one of the adhesive strips on the lower edge of the battery.
Step 66

- Use a pair of tweezers with blunt tips to peel back the other adhesive strip on the lower edge of the battery.
Try to keep the strips flat and unwrinkled during this procedure; wrinkled strips will stick together and break instead of pulling out cleanly.

- Slowly pull one battery adhesive tab away from the battery, toward the bottom of the iPhone.
- Pull steadily, maintaining constant tension on the strip until it slips out from between the battery and the rear case. For best results, pull the strip at a 60° angle or less.

The strip will stretch to many times its original length. Continue pulling and re-grab the strip near the battery if necessary.
Step 68

- Repeat the previous step for the second strip.
  
  **⚠️** Hold down the battery as you remove the second strip, or the strip may fling the battery when it separates from the case.

- **If you removed both adhesive strips successfully, skip the next step.**
  
  - Otherwise, if either of the adhesive strips broke off underneath the battery and could not be retrieved, **continue with the next step below.**
If you successfully removed both adhesive strips, move on to the next step. Otherwise, you will need to pry the battery from the rear case.

- Prepare an iOpener and apply it to the back of the rear case, directly over the battery. Alternatively, you can apply heat using a heat gun or hair dryer.

- After about a minute, remove the iOpener, flip the phone over and use a plastic card to break up any remaining adhesive behind the battery.

⚠ Avoid bending the battery. Damage to the battery may release dangerous chemicals, and could start a fire.

⚠ Do not pry under the top third of the battery, you may damage the volume button ribbon cable.
Step 70

- Remove the battery from the rear case.

When installing the battery, refer to this guide to replace your battery's adhesive strips.

Step 71 — Power and Volume Control Cable

- Remove the following Phillips screws:
  - Two 1.9 mm screws securing the power button.
  - Three 2.3 mm screws securing the volume buttons.
Step 72

- Remove the following 1.3 mm Phillips screws:
  - One screw beside the rear-facing camera
  - One screw on the rear case
Step 73

- From the outside of the phone, push the hold switch into the rear case with the point of a spudger.
- This action will free the hold switch and gasket from the rear case.

Step 74

- Use a pair of tweezers to remove the rear-facing camera.
Step 75

- Moving from power button side of the phone, use an opening pick to separate the adhesive holding the antenna flex cable to the rear case.

Step 76

- Slide the point of an opening pick underneath the antenna flex cable towards the top of the phone, separating the remaining adhesive.
Step 77

- Use tweezers to move the antenna flex cable away from the edge of the phone, freeing the screw bracket from the rear case.
- Remove the antenna flex cable.

Step 78

- Remove the 2.3 mm standoff screw securing the flash bracket to the rear case.

Important: Standoff screws are best removed using an iPhone Standoff Screwdriver Bit and driver handle.

Caution: In a pinch, a small flathead screwdriver will do the job—but use extra caution to ensure it doesn't slip and damage surrounding components.
Step 79

- Remove the flash bracket.

Step 80

- Use the point of a spudger to gently unseat the flash module.
Step 81

- Use the blade of a Halberd spudger to separate the adhesive holding the microphone to the rear case.

Step 82

- Gently fold the power button module from the edge of the rear case.
Step 83

- Slide the blade of a halberd spudger under the power button end of the button cable to separate it from the adhesive on the rear case.

- Continue to separate the adhesive by moving the blade towards the top of the phone.

Step 84

- Continue to move the blade of the halberd spudger underneath the power and volume control cable.

⚠️ Move slowly to make sure that the cable is not damaged during removal.
Step 85

- Slide the halberd spudger under the volume control portion of the button cable.
- Gently slide the blade underneath the cable towards the bottom of the phone, separating the remaining adhesive.

Step 86

- Remove the power and volume control cable.
**Step 87 — Power Button**

- Pull the clip towards the bottom of the phone and lift up to free it from the bracket.

**Step 88**

- Remove the clip from the rear case.
Step 89

- Push the lower end of the power button bracket up off of peg securing it.

Step 90

- Pull the bracket from the rear case.
Step 91

- Use the pointed end of a spudger to push the power button cover out of the rear case.
- Remove the power button cover.

Step 92 — Volume Buttons

- Pull the volume button clip towards the bottom of the phone to free it from the bracket.
Step 93

- Pull the clip towards the top of the phone to remove it.

Step 94

- Pull the volume button clip towards the bottom of the phone to free it from the bracket.
- Pull the clip towards the top of the phone to remove it.
Step 95

- Slide the flat end of a spudger underneath the bottom edge of the volume button bracket.
- Adjust the spudger so that it can move away from the rear case without contacting the protruding peg that is on the volume button.
- Rotate the spudger to pop the bracket off of the peg on the volume button.
Step 96

- Pull the bracket from the rear case.

Step 97

- Repeat the procedure to remove the second volume button bracket.
Step 98

- Use the pointed end of a spudger to push each of the volume button covers out of the rear case.
- Remove the volume button covers.

Step 99 — Rear Case

- Use the point of a spudger to push the left rubber speaker vent out of the rear case.
**Step 100**

- Repeat the procedure to push the right rubber speaker vent out of the rear case.

**Step 101**

- Remove the 1.5 mm Phillips screw securing the grounding bracket.
Step 102

- Remove the grounding bracket.

Step 103

- Only the rear case remains.

To reassemble your device, follow these instructions in reverse order.
