-

Step 1 — Fixing scratches on the AirPods charging case

i Both sides are heavily scratched

Step 2

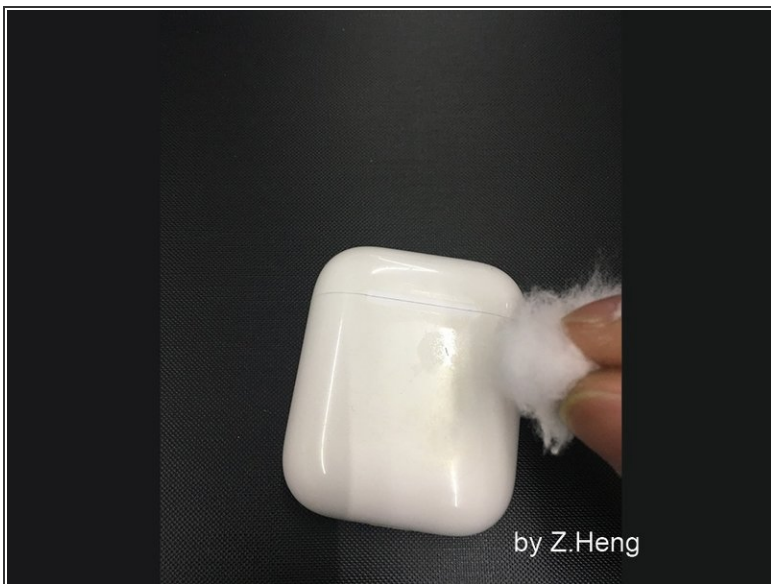

- Use P2000 to P30000 sandpaper. I first used P2000 sandpaper, and then P30000 sandpaper.

Step 3

- After sanding the charging box, clean with a cotton swab and rubbing alcohol

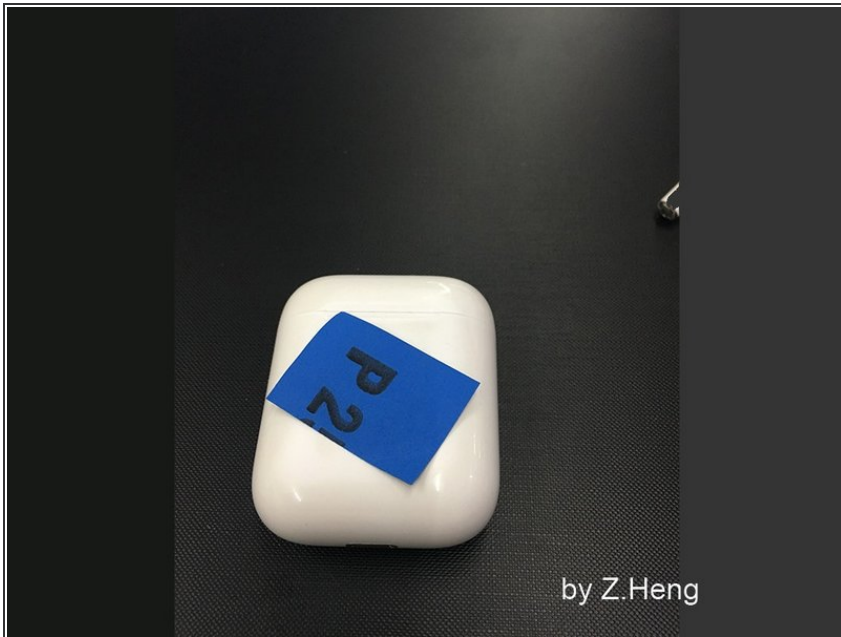

Step 4

- Use cotton and alcohol to clean the surface of the charging box.

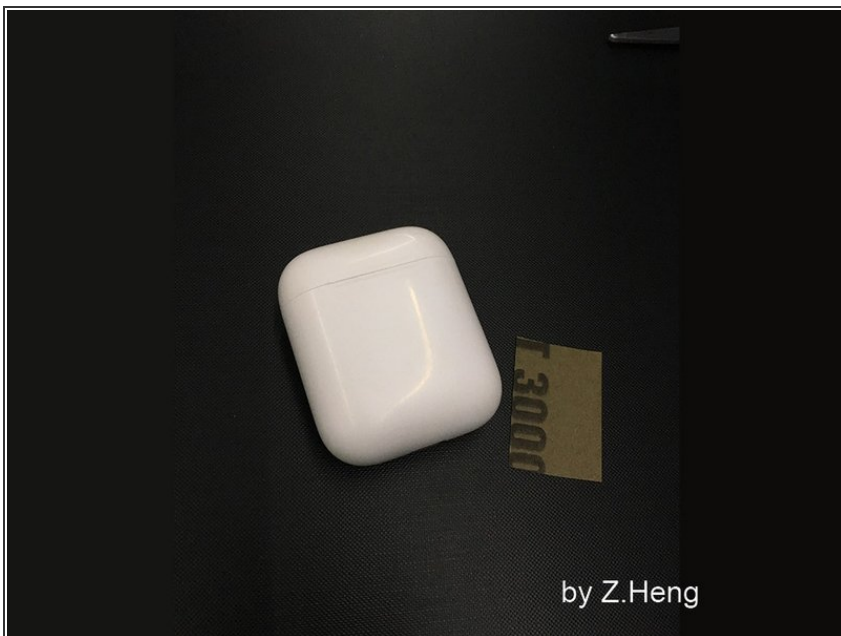

You should also clean the inside.

Step 5

- Wet the surface with cotton and alcohol (or water), and use P2500 sandpaper to polish the surface.
- Most of the scratches should now look smooth. The shiny surface should have become matte.
- ⓘ Depending on the state of the case, you can redo this step several times.

Step 6

- There are no more scratches, but the surface is still matte.
- ⓘ If you have suddenly become fond of this matte feel, you are done.
- If you prefer the shiny surface, use >P3000 sandpaper and conduct step 5.

Step 7

- And the box is back to near pristine condition!

The charging box should now be in pristine condition
