

Microsoft Surface Pro 5 Screen Replacement

How to replace the touchscreen and display on your Microsoft Surface Pro 5 or Microsoft Surface Pro (2017).

Written By: Caleb Granch

INTRODUCTION

This guide will go over how to remove the screen/display on the Microsoft Surface Pro 5, also known as the Microsoft Surface Pro (2017).

TOOLS:

- [iOpener](#) (1)
- [iFixit Opening Picks set of 6](#) (1)
- [iFixit Opening Tools](#) (1)
- [Spudger](#) (1)
- [Suction Handle](#) (1)
- [Heat Gun](#) (1)

PARTS:

- [Surface Pro 5 Screen and Digitizer](#) (1)
-

Step 1 — Screen

! Before you begin, discharge the Surface Pro's battery below 25%. A charged lithium-ion battery can catch fire and/or explode if accidentally damaged during the repair.

i The display is strongly glued to the frame of the device.

- To remove the display, first soften the adhesive by applying heat. You can use a heat pad, heat gun, or iOpener. In a pinch, a hair dryer can also work.

! Be careful when using a heat gun, as too much heat can permanently damage the display and/or battery.

- Steadily and evenly heat the perimeter of the display until it's too hot to touch, and try to maintain that temperature for several minutes.

Step 2

- Use a suction cup or an iSclack to pull up on the glass and create a slight gap between the glass and the metal frame.
 - ⓘ If your display is badly cracked, a suction cup may not adhere. It may help to first cover the display with a layer of packing tape. Alternatively, you can superglue your suction cup to the display.
- Insert an opening pick into the gap.
- Slide the pick around the sides and bottom of the display to cut the adhesive. Apply more heat as needed.
- ⚠ Work carefully—the glass is thin and will crack easily if you try to force it.
- Separate the top edge last. There are antennas on both sides, so be careful not to damage them. Use more heat or a bit of isopropyl alcohol to help weaken the adhesive.

Step 3

- Pry up the metal shield covering the smaller ribbon cable port using the plastic opening tool.
- Disconnect the smaller ribbon cable by prying up with the nylon spudger.

Step 4

- Pry up the metal shield covering the larger ribbon cable port using the plastic opening tool and remove.
- Disconnect the larger ribbon cable by prying up with the nylon spudger.

Step 5

- Remove the screen from the rest of the device .

To reassemble your device, follow these instructions in reverse order.
